

• Using the 75-PW Washers with the Pos-I-Tie®

- Using the 75-PW Washers with the Pos-I-Tie® Barrel Screws combines two steps into one by securing the insulation board with the Veneer Anchor (vs. securing the insulation with screws/washers and then adding the brick ties) thus saving time and money.
- The washer is slipped onto the Original Pos-I-Tie® for easy installation at the jobsite. Using this method, the number of penetrations through the insulation are greatly reduced thus reducing thermal bridging. Combining the Pos-I-Tie® with the 75-PW washer, the amount of required CI washer/screw fasteners can be reduced by up to half.
- The 75-PW washers are designed to compress on the insulation surface effectively sealing the fastener penetration against air and moisture infiltration.

**Apply Large Washer to factory assembled Pos-I-Tie®** (Large washer should be flush against existing washer)\*

**For use with the #75 Pos-I-Tie® Masonry Veneer Anchoring System**

QUANTITY: \_\_\_\_\_

- Allows the barrel screw to act as a continuous insulation fastener.

*Pos-I-Tie® Barrel Screw sold separately\* Available in box quantities of 250 and 1,500 pieces*

Heckmann is not responsible for your choice of anchors and dimensions for your project. The choice of anchors and products should be decided by the architects or engineers knowledgeable with the project. Once a custom order has been placed it cannot be canceled or returned. Any changes to the original order may require additional charges. Your signature is required for us to proceed. By signing this order, you agree that you have reviewed the details and specifications of the custom order and that said details and specifications are per your request. Further, by signing this order you are waiving any claim against or right of non-payment for products produced to the specifications of the order.
